

# **Integration Objects'** OPC Real-Time and Historical Data, Alarms and Events Archiving Solution

## OPC EasyArchiver Version 3.0 Rev.2

# **QUICK USER GUIDE**

OPC EasyArchiver Quick User Guide Version 3.0 Rev 2 Published June 2021 Copyright © 2014-2021 Integration Objects. All rights reserved.

### **ABOUT THIS USER GUIDE**

This guide is a step by step guide on how to install, configure and run OPC EasyArchiver.

## **INSTALLATION PRE-REQUISITES**

In order to properly run the OPC EasyArchiver, install these software components on the target system:

- .NET Framework version 4.0 or higher.
- OPC Core Components version 3.00. You can deploy them during the installation by checking the option "Install OPC Core Components" or after installation by using the setup available in the installation folder of the OPC Easy archiver.

If the OPC Easy Archiver deployment version is 64 bit, you need to install the 64-bit version of the OPC Core Components.

If the OPC Easy Archiver deployment version is 32 bit, you need to install the 32-bit version of the OPC Core Components.

The table below lists the prerequisites to communicate with databases:

Database	Database Connector Pre-requisite
MS SQL Server	Uses ADO .Net to communicate with the database. No pre-requisites need to be installed.
MS Access	Requires Microsoft Office to be installed.
Oracle	Uses a fully-managed ADO .NET provider to
	communicate with the database. No additional
	Oracle Client software is required to be installed to
	connect to Oracle Database.
MySQL	Uses embedded MySQL connector to communicate
	with the database. No pre-requisites need to be
	installed.
ODBC	Requires the ODBC driver to be installed in order to
	communicate with the corresponding database
	source type.
OLEDB	Requires the OLEDB driver to be installed in order to
	communicate with the corresponding database
	source type.
PostgreSQL	Uses ADO .Net to communicate with the database.
	No pre-requisites need to be installed.
CSV	No pre-requisites need to be installed.

#### Table 1: Database Connector Pre-requisites

## **INSTALLING OPC EASYARCHIVER**

To install the OPC EasyArchiver, right click on the installation executable and select "**Run as administrator**" from the displayed menu. Then, the installation wizard will take you through the different installation steps.

Before the completion of the installation, a dialog will be displayed in order to configure the user account that will be used to run the OPC EasyArchiver services. Make sure that the configured account has the right to log on as a service and to connect to your OPC Servers.

Note that you can still modify this user account configuration after the installation using the Windows Services panel.

### **CONFIGURING OPC EASYARCHIVER**

Go to Start => Programs => Integration Objects => OPC EasyArchiver => OPC EasyArchiver and start the OPC EasyArchiver.

### **Configure OPC DA to DB Archiver**

1. Right click on the OPC DA Servers node and then select the **Connect to OPC DA Server** menu item.

Figure 2: Connect to DA Server

2. Select your OPC DA Server from the displayed list and click on the Connect button.

- 3. Right click on the connected OPC DA Server and then select the Add Group menu item.
- 4. Enter the OPC Group parameters and click on the Apply button.
- 5. Right click on the OPC group node and select the Add Items menu item.
- 6. Browse the OPC DA server address space and select the required OPC items. Then, click on the Apply button.
- 7. Go to the Archivers tab
- 8. Right click on the DA Archiver node and select the Add New DA Archiver from the displayed menu:

Figure 3: Add New DA Archiver

- 9. Select the archiver name and the server type.
- 10. Configure the database credentials/connection string.
- 11. Select your tables.
- 12. Select the group to be assigned to this archiver.
- 13. Right click on the created archiver and then select the Start Archiver menu item

OPC Servers	Archivers	Rules Loops

### Configure a DB to OPC Transfer

- 1. Connect to your OPC DA Server, add a group and add the items to where the data will be written
- 2. Go to the DB to OPC Transfer tab and click the New button.

Figure 5: DB to OPC Transfer Menu

3. A wizard will be prompted to configure the transfer. Select the transfer name and the database type.

4. Configure the database credentials/connection string. Then, click the Next button. The following window will be displayed:

🤯 Add New DB to OPC Transfer W	lizard	_ ×
Select your tab	les	
Table Information :		
Create New Table	WriteTable	Select Columns
Browse Available Tables	HistoryTableuyjk 💌 Map	Select Columns
DB Read Frequency	1000	
DB Read Frequency (ms).	1000	
	< Back	Next > Cancel

Figure 6: DB to OPC Transfer Table Configuration Dialog

- 5. You can either create a new table or select an existing table.
- 6. If you select an existing table, you will need to map fields of the tables. Click the Map button to proceed. Drag and drop the field from the existing table to the corresponding one in the template table.
- 7. Set the DB Read frequency field, which is the frequency to be used to check for new data in the database.
- 8. Select the OPC Group that contains the tags to which data will be transferred.

## The field mapped to the <u>Started field should be set to 0</u> for the rows to be transferred from the database to the OPC Server.

9. To configure your own qualities values, click the Configure Quality mapping context menu item:

Figure 7: Configure Quality Mapping Menu Item

10. To start the transfer, right click to the transfer in the Transfers tab and click Start:

OPC Servers	Archivers	Rules	Loops	Transfers	
				$  \mathcal{P} \rangle$	<b>\$</b>

### Figure 9: Connect to HDA Server

- 2. Select your OPC HDA Server from the displayed list and click on the Connect button.
- 3. Right click on the connected OPC HDA Server and then select the Add Items menu item.
- 4. Browse the OPC HDA server address space and select the required OPC items. Then, click on the Apply button.
- 5. Right click on the HDA Archiver node and select the Add New HDA Archiver from the displayed menu:

Figure 10: Add New HDA Archiver Menu Item

- 6. Select the archiver name and the server type.
- 7. Configure the database credentials/connection string.
- 8. Select your tables.
- 9. Select the OPC HDA Server to be assigned to this archiver.
- 10. Right click on the created archiver and then click on the Start Archiver menu item

### **Read Raw Loop**

Read Raw Loop		X
Operation name ReadRawLoop1		
Items		
ItemID		
Random/Boolean		
Parameters		
Absolute time Relative time		-
Start Time 08/01/2019 09:53:00 rms	0 🌲	
Loop Period (sec)		
Waiting Time (sec) 10		
Number of values 0 💭 🔲 Bounds		
Restart from Last Executed Time		
Split into Multiple Loops		
End Time 08/01/2019 09:53:00 rms	0	
OK Cancel		

Figure 13: Read Raw Loop

- 12. Configure the read raw loop parameters as follows:
  - **Start Time**: The beginning of the history period to be read for the first read request within this loop
  - Loop Period: The time interval of each read raw.
  - Waiting Time: The waiting time between 2 read operations
  - Restart from Last Executed Time: If checked, the read raw loop will start from the last executed time.

If not, the read raw loop will start from the initially configured start time.

• **Split into multiple loops:** If checked, multiple read raw loops will be created automatically per the maximum items size configured in the settings.

• End Time: If checked, the read raw loop will be stopped when the specified date time is reached.

### **Read Processed Loop**

Read Processed L	оор	-	x
Operation name	ReadProcesse	dLoop1	
	lter	ns	
ItemID		Aggregate	
Random/Boolean		OPCHDA_INTERPOLATIVE

	Paran	neters	
Absolute time	Relative time		-
Start Time	08/01/2019 0	9:57:32 💌 ms 🛛 0	* *
End Time	08/01/2019 0	9:58:32 💌 ms 🛛 0	•
Resample Inter	/al (sec)	10 🌲	
Waiting Time (s	ec)	10 🌩	
Restart From	n Last Executed Tin	ne	
🗷 Split into Mu	Itiple Loops		
End Time	08/01/2019 0	9:58:32 💌 ms 🛛 0	*
	ОК	Cancel	

Figure 14: Read Processed Loop

13. Configure the read Processed parameters as follows:

- **Start Time:** The beginning of the history period to be read for the first read request within this loop.
- End Time: The end of the history period to be read for the first loop.
- Resample Interval: The time interval between returned values.
- Waiting Time: The waiting time between 2 read operation
- **Restart from Last Executed Time:** If checked: The read processed loop will start from the last executed time.

If not: the read processed loop will start from the initially configured start time.

• **Split into multiple loops:** If checked, multiple read processed loops will be created automatically per the maximum items size configured in the settings.

### Configure OPC AE to DB Archiver

1. Right click on the OPC AE Servers node and then select the **Connect to OPC AE Server** menu item.

Figure 15: Connect to AE Server

- 2. Select your OPC AE Server from the displayed list and click on the Connect button.
- 3. Right click on the connected OPC AE Server and then select the Create Event subscription menu item.
- 4. Enter the OPC Event Subscription parameters and click on the OK button.
- 5. Right click on the AE Archiver node and select the Add New AE Archiver from the displayed menu:

□ Archivers	
DAArchivers	
HDA Archivers	
AEArchive	
4	Add New AE Archiver

Figure 16: Add New AE Archiver Menu Item

- 6. Select the archiver name and the server type.
- 7. Configure the database credentials/connection string.
- 8. Select your tables.
- 9. Select the subscription to be assigned to this archiver.
- 10. Right click on the created archiver and then select the Start Archiver menu item.
