ABOUT THIS USER GUIDE

This guide is a step by step guide on how to install, configure and run OPC UA Server for Databases.

INSTALLING OPC UA SERVER FOR DATABASES

In order to properly run the OPC UA Server for databases, install .NET Framework 4.6 on the target system.

To install the OPC UA Server for Databases, run the installation executable using an administrator account and the wizard will guide you through the different installation steps.

CONFIGURING OPC UA SERVER FOR DATABASES

Go to **Start => Programs => Integration Objects => OPC UA Server for Databases => OPC UA Server for Databases** and start the OPC UA Server for Databases

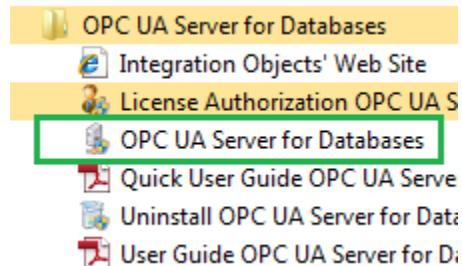

Figure 1: OPC UA Server for Databases Start Menu

STEP 1: ADD NEW DATABASE LINK

Using the configuration tool, right click on the “Server Configuration” node, and select “**New database link**” from the displayed server menu.

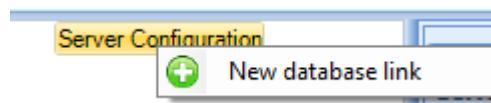

Figure 2: New Database Link

Then, the new database link wizard will be prompted.

STEP 2: NAME THE DATABASE LINK AND CHOOSE THE SOURCE TYPE

Type a name to define your database link, select the source type and specify how to retrieve OPC tags as shown in the figure below:

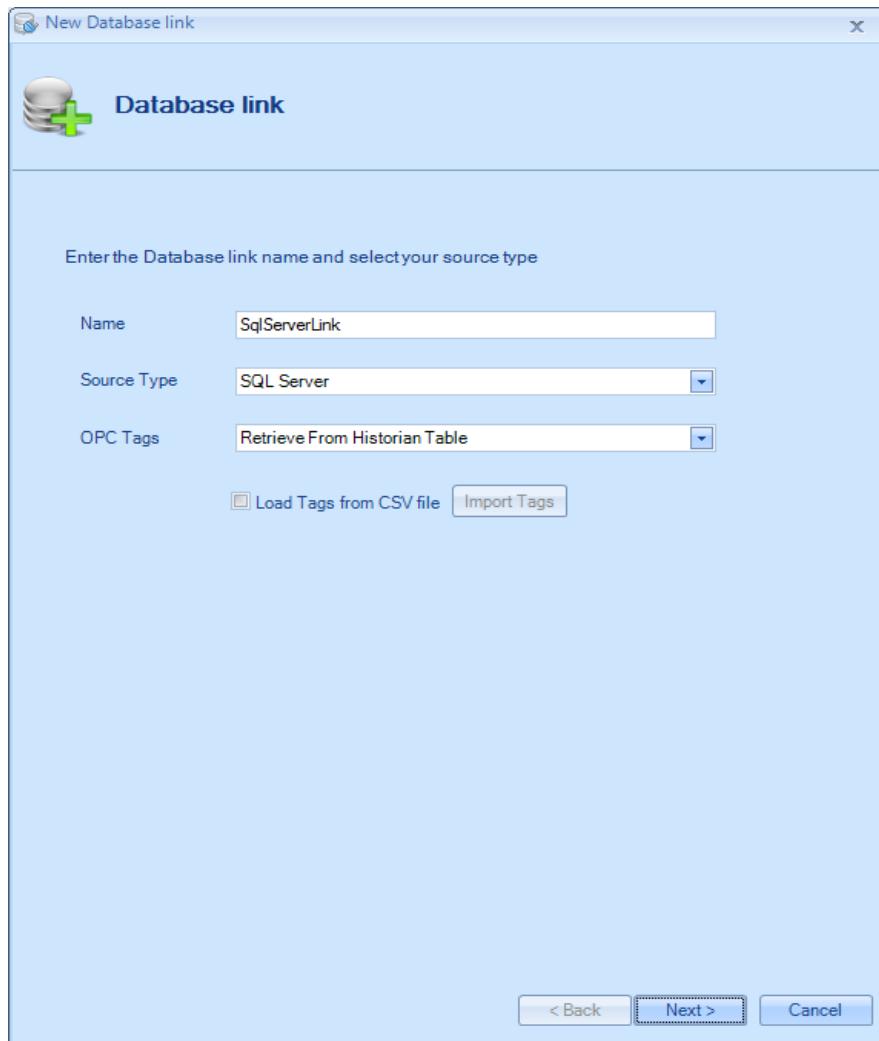

Figure 3: Configure the Database Link

Click the next button to configure the connection string related to the selected database provider.

STEP 3: CONFIGURE DATABASE CONNECTION

Set server connection settings by typing the server instance name, the authentication mode and the database name.

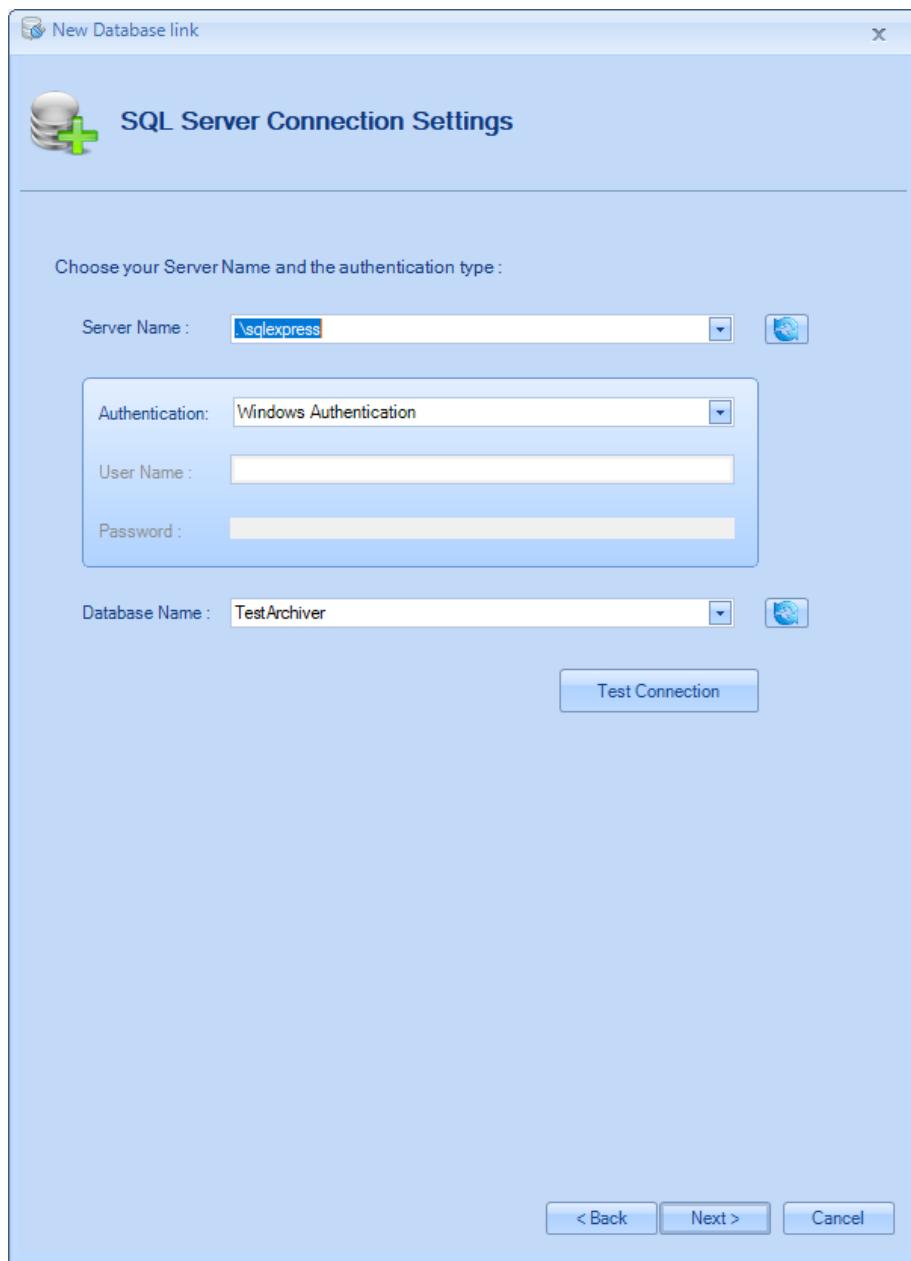

Figure 4: Configure Server Connection Settings

STEP 4: MAP TABLE FIELDS

Map the table fields with the standard OPC tags attributes.

New Database link X

Mapping table fields

Use Separate Definition Table

Table Name	<input type="text"/>	
Tag ID	<input type="text"/>	
Tag Name	<input type="text"/>	
Tag Type	<input type="text"/>	

Table Name

Tag Name*

Tag Value*

Tag Timestamp*

Unix Time

Tag Timestamp MilliSec

Tag Quality

Tag Type

Default Type

Export Tags

Use Separate Table for Real-time Data

Table Name <input type="text"/>		
---------------------------------	--	--

Interpolation

5 Minutes; 0 Seconds

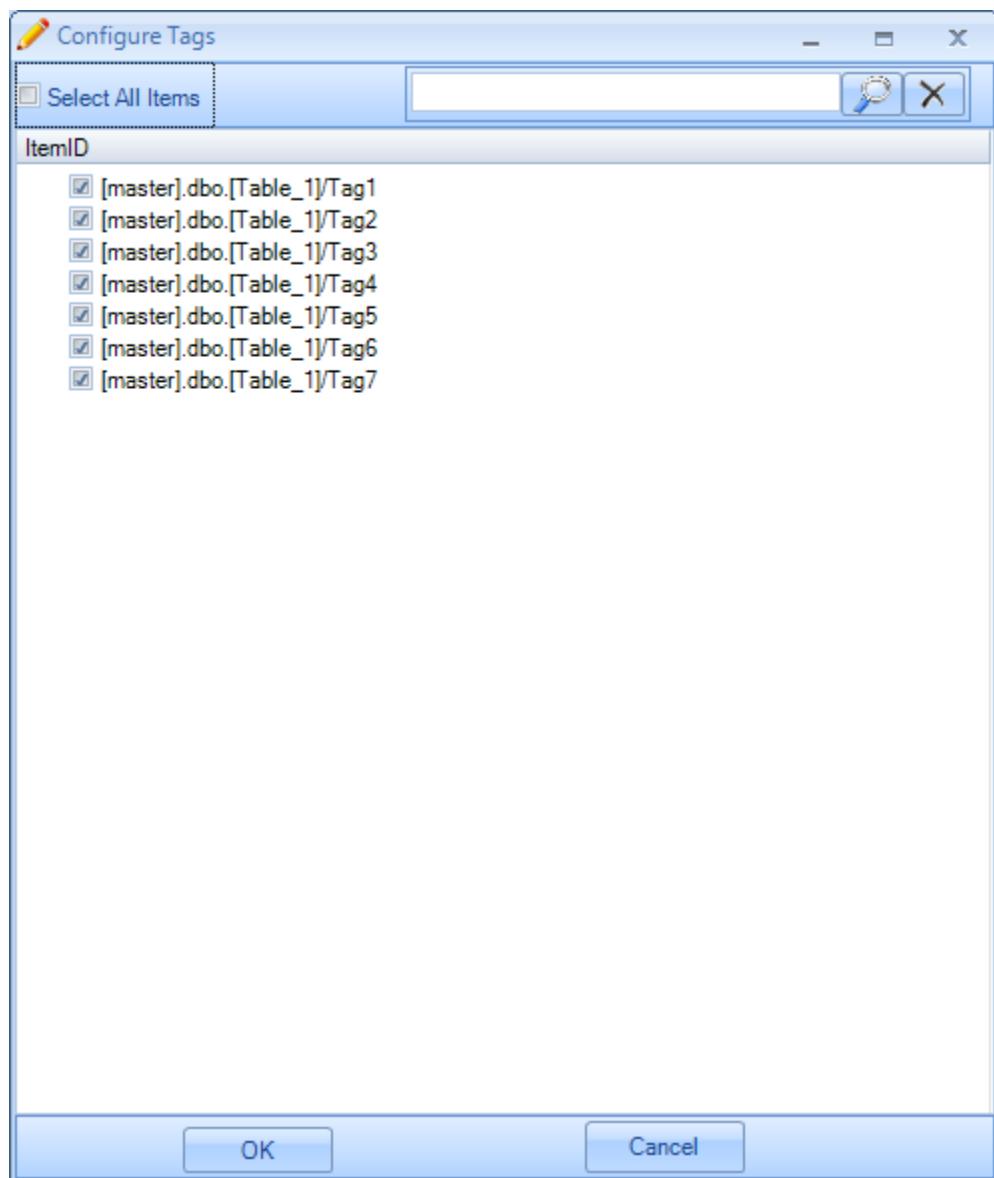

< Back Next > Cancel

Figure 5: Map Table Fields

Then, click the **Configure Tags** button. A window will be displayed to choose the tags that will be included in the server address space.

STEP 5: CHOOSE TAGS

Select the tags that will be added to the Database link and then click **OK**.

**Figure 6: Choose Tags**

STEP 6: SAVE THE CONFIGURATION

Click the **Save** Button to save the current configuration.

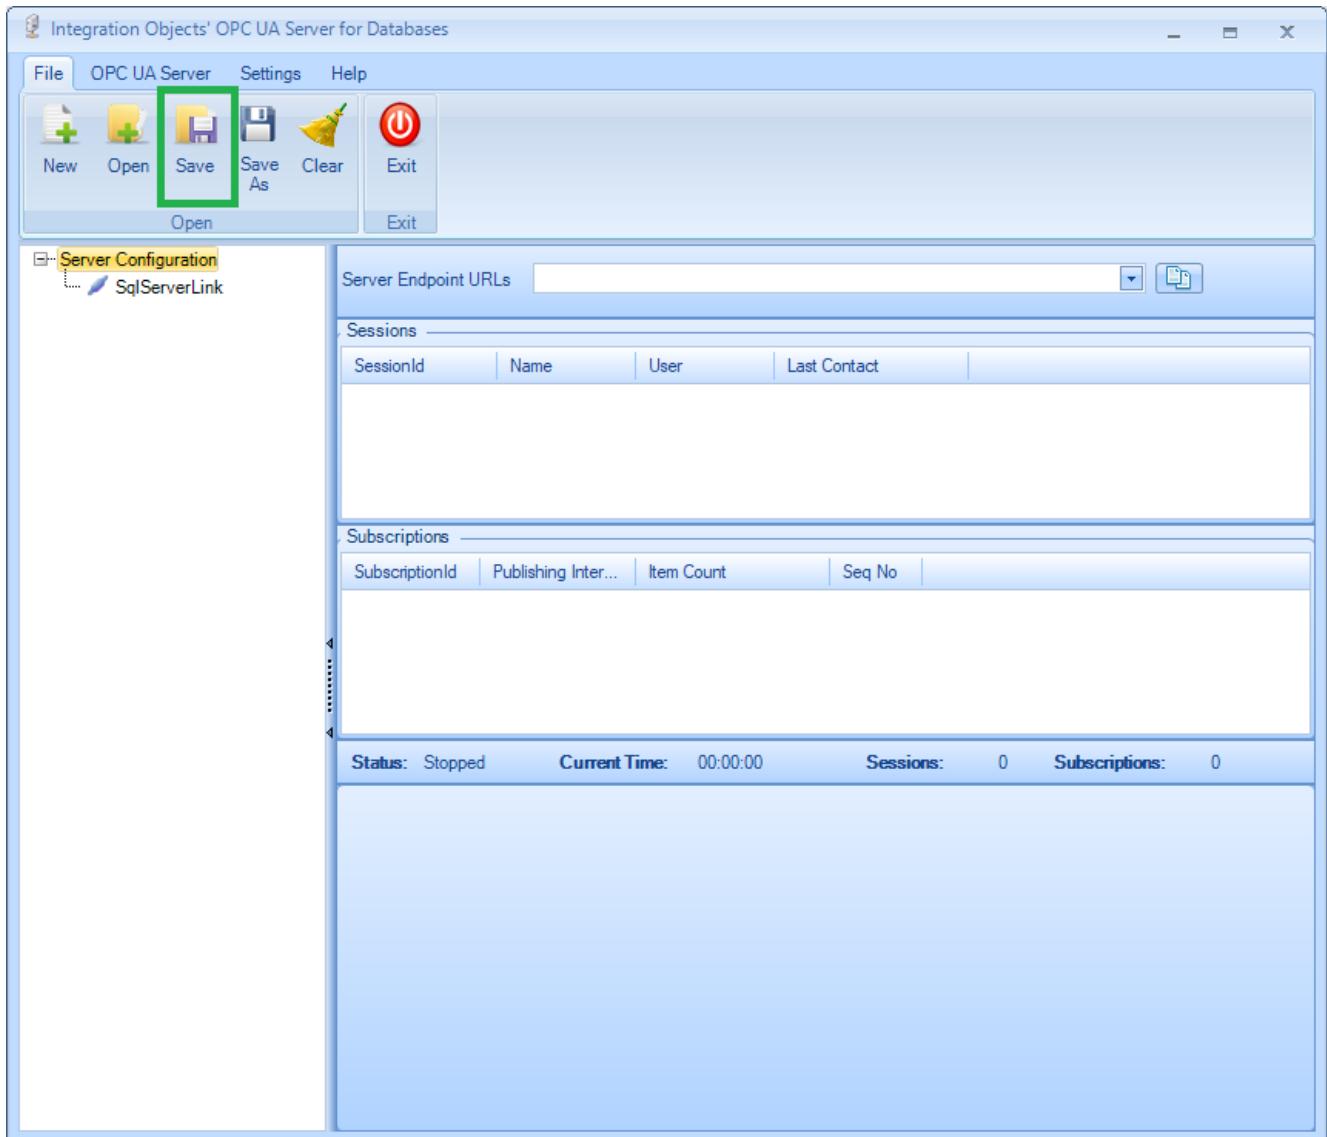

Figure 7: Save the Configuration

Click **Yes** when prompted to restart the application and then connect to the OPC UA Server for Databases through an OPC UA Client.
